

Neck Profile Re-work –

Sometimes the subtle characteristics of the instrument can limit the playability and enjoyment given to the owner. A case in point is this guitar that delivered beautiful tone, volume and sustain but just didn't feel right in the player's hand. The solution was to measure the neck profile from guitars that delivered the desired playability, then remove the neck and rework it to achieve that profile. After refinishing, reassembly and setup the guitar was better than ever.
